# The Leukemia-Lymphoma Cell Line Factsbook

## Synopsis

The Leukemia-Lymphoma Cell Line Factsbook represents an essential reference manual for all of the well-characterized leukemia-lymphoma cell lines currently available. It provides the most important facts, using the succinct and user-friendly format that has made the FactsBooks so popular with scientists and clinical researchers. Introductory chapters provide background and perspective for culturing malignant hematopoietic (blood forming) cell lines. These chapters are followed by over 400 comprehensive individual entries. Each cell line entry highlights essential clinical, immunological, genetic, and functional features and includes a comprehensive listing of references. The full spectrum of malignant cell lines from all hematopoietic cell lineages

Sister cell lines and relevant subclones

Clinical data: patient, diagnosis, treatment status, and specimen source

Authentication of derivation and availability

Immunophenotype

Cytogenetic karyotype

Translocations and fusion genes

Receptor gene rearrangements and genetic alterations

Cell cultures aspects: establishment, medium, doubling time, growth

Cytochemical profile

Cytokine production and response to cytokines

Proto-oncogene and transcription factor expression/alteration

Functional features: differentiation induction, heterotransplantability

Special unique features
