Danger! Volcanoes

Synopsis

SeeMore about volcanoes - from powerful explosions to flowing rivers of hot, fiery lava - in this book from award-winning science author Seymour Simon. With fascinating facts and amazing images, Simon presents an irresistible invitation to growing readers to question, explore and discover the exciting world around them, to learn the causes of volcanoes, how they build up the surface of the earth and what to do if you are near an eruption.

Best Sellers Rank: #652,195 in Books (See Top 100 in Books) #125 in Books > Teens > Education & Reference > Science & Technology > Earth Science

Customer Reviews

The SeeMore Readers series by Seymour Simon continues with the addition of four new titles. Baby Animals and Fighting Fires are Level 1 readers (preschool to grade three); Level 2 readers (grades 1-3) include Danger! Volcanoes and Amazing Aircraft. Softcover editions contain a perforated page of four collectible cards with full-color photographs on one side and facts on the other. (July)

Grade 1-3-Simon gets to the essence of his subjects through bold, dramatic color photographs and short, crisp texts. The first book draws comparisons between how long it took early aircraft to accomplish their missions and how long it takes modern planes; the inclusion of data about an aircraft of the future adds a touch of excitement. The description of the Hindenburg tragedy, however, seems stuck in between the discussions of various types of vehicles and their capabilities. Still, this is a good introductory title. Volcanoes begins with two full-page spreads of volcanoes erupting, first with a sky of smoke and then with a sky of fire. There can be no doubt in youngsters'

minds that they are reading about something powerful, and Simon describes the damage as well as the positive aspects of these explosions. The photographs are so compelling that it is a shame that they are not identified (although the sources are given). How a volcano changes the weather and how lava comes through that hole in the ground are left unanswered, but this introductory book is meant to whet the appetite, and that it does. Edith Ching, St. Albans School, Mt. St. Alban, Washington, DC Copyright 2002 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

a gift . recipient was not excited about it

Great read! Students loved it!

VOLCANOES!!! This book can tell you where, how, when, and why the volcanoes erupt. Do you want to know how they are formed? Well, you can find out in this book. Apparently, right now we could be standing on something that used to be a volcano. Did you know there are different types of volcanoes? From Cinder Cones to Dome Volcanoes, this book is a great source of volcano information. I enjoyed reading this book because it has some really cool facts that I didn't know before. My favorite part was a picture of lava that was burning down a building. I loved the large number of photos that were throughout the book. I thought that the writer did a great job explaining volcanoes and I learned a lot. One thing that bothered me was that there wasn't a glossary or an index. If you are interested in volcanoes, this book is a good fit for you.

my son really enjoyed reading about all the different types of volcanos and learning that even through the destruction it makes room for new life! What a beautiful world other God Has made:)
